

Future Changes to General Provisions for Rehabilitation of Concrete Buildings: Task Group B

Task Group B is concerned with updating the section “General Assumptions and Requirements” of ASCE/SEI 41 Chapter 6. In particular, the potential future changes of this section will be discussed, which include modeling, member strength and deformation limits, reinforcement development, and connections to existing concrete. Along with presenting the general scope of Task Group B, the rationale behind prioritizing the document updates will be presented.
